

Cryptocurrency? What's that doing in a school download site?

While you may expect the site was hacked ... because generally any site with crypto software for download has at least a 50% chance of being hacked....this is just a learning opportunity.

You can learn about blockchain, a little about programming, a tad about OSs and its designed to run on a Raspberry Pi which everyone should have at KTU. So take this time to consider installing this OS on an SD card and fire up your own Bitcoin Node.

Any profits you make are your own, because the expense of electricity will likely exceed the earnings.

Thanks,

Matthew Leffler
KTU President
